Join Date: 09/12/2024	
Position: System Administrator	Department: SAT
Superior: Yeoh Wei Chen	Date of review:
Current Salary: RM4001	
Allowance (if any):	

Expectation (KPI) Set From Last Evaluation	- Enhanced knowledge and exposure of AWS - Improve productivity with knowledge like create a script - Ensure networking in G2G is smooth for everyone
Which Expectation (KPI) From Last Evaluation is Met	Both of the KPI have met. But I think there still got a big improvement for it: - AWS still learning AWS Q developer and AWS bedrock, can it work automation to replace auto scaling - Created a script for laptop using miradore mdm(Free). It can auto download the app needed can save 30 minit.
1 Best Achievement from Last 6 months	Founded a hijack vulnerability. After it I have confirm this does it real and where have exposed to. First search from google founded a documentation, and a lot of youtube video about this vulnerability. Moreover, confirm with Keith does the server have received some abnormal order, Keith say yes. Finally report this issue to management and discuss any solution to fix it.
Most Challenging Aspects of Current Task That Have Encountered	My first challenge is multitasking. While working on a long or complex task, I often receive technical issue requests from others. When that happens, I aim to resolve the issue within 20 minutes so that the other person can continue their work without delay, and I can return to mine. This approach helps maintain productivity for both of us.
Top experience gained that you wish you had done differently in the past 6 months	Top experience that I gained in the past six months is building PCI DSS compliance from the ground up. In my previous experience, the PCI environment was already certified, and I only had to handle minor upgrades, which were relatively simple. However, setting up PCI DSS required significant time, in-depth knowledge, proper resource planning, and continuous testing to ensure each step worked as intended. Throughout the process, I had to apply strong critical thinking, such as understanding which types of data are not allowed, as pointed out by PK and finding alternative solutions that still meet PCI requirements. This experience strengthened both my technical and problem-solving skills.

For management use only

Score: 1 = Poor, 2 = Fair, 3 = Average, 4 = Good, 5 = Excellent

Performance Rating Standards	Score	Comment
Job Knowledge	3.5	
Quality of work	4	
Sense of Responsibility	5	
Dependability	5	
Initiative	5	
Time Management	4	
Stress Management	4	
Intelligence/Decision making ability	3	
Leadership	3	
Over-all impression of the Employee	4	

Expectations for the next evaluation

- Develop the ability to propose potential solutions or improvement plans when raising issues or suggesting new initiatives.
- When requesting network or system upgrades, should ensure that complete and detailed information—such as current setup, proposed changes, and expected outcomes—is included to facilitate better decision-making.
- Focusing on Networking & security related

Comments of Head of the Department

- Demonstrates strong initiative in implementing new tasks and resolving issues promptly.
 - Coordinates effectively with both vendors and internal company personnel to ensure smooth operations.
 - Shows a positive attitude and willingness to take on any assigned responsibilities, regardless of complexity or urgency.
- He is a reliable and proactive team member who consistently demonstrates commitment and adaptability. With further development in analytical and planning skills, he will continue to grow as a valuable contributor to the IT team.
