Superior: Yeoh Wei Chen	Date of review:
Current Salary: Basic Salary: Allowance (if any):	Any Freelance (Yes/No): If Yes, estimate income:

Top 3 Achievements in the Past 6 months

(July 2025 ~ December 2025)

1. Founded Hijack Vulnerability that could led a huge damage to G2G, I know that it was handle by Triple A, cant solve in G2G, but i believe that be sensitive to company date leaking or cybersecurity issue can reduce the risk been attack.
2. Successfully coordinated the end-to-end PCI DSS certification for Pipwave. This achievement provides a high-security foundation for both G2G and OG platforms, instilling buyer/seller confidence and ensuring all payment transactions are processed through a globally recognized, secure gateway.
3. Created automation scripts that reduce laptop setup time by 50% (from 30 minit to 15minit). I'm applying this same mindset to the rest of my tasks —if it's a manual workload that wastes time, I'm looking for a way to script it and make it more efficient.

Top 3 Achievements in the Prior Past 6 months

(January 2025 ~ June 2025)

(should align with last submission)

1. Understand Cloud integration, like AWS, Akamai and Google workspace. Like how their work together, AWS integrate with AKamai with multiple layer protection
2. Optimised macOS technical support protocols, achieving a consistent resolution time of under 15 minutes for staff issues. This efficiency directly minimised employee stuck on laptop, can be more focus on core business objectives.
3. Initiated the development of PCI DSS compliance frameworks for Pipwave, establishing a high-security payment gateway standard. This foundation is critical for securing G2G and OG contracts, ensuring our payment infrastructure meets the most rigorous global financial safety requirements.

Performance Ranking (by Superior) :

(e.g. 1/10 indicates the team member is the top performer in the team)

Superior's expectation for improvement :
